

# Fulvicherb - Synergy

Fulvic Acid – Arginine – Inulin – Herb Complex

**Natural help for your wellbeing**

The ingredients of Fulvicherb may have the following physiological effects on the human body:

- better immune function
- reducing fatigue and irritability
- reducing autoimmune symptoms
- the regulation of the intestinal bacteria
- the protection of the stomach and the intestinal mucosa
- the production of digestive juices
- the prevention of kidney stone formation and bacterial overgrowth in the urinary tract
- liver regeneration
- increasing oxygen delivered to the tissues
- healthy blood flow and the regulation of blood pressure

## SUPPORT YOUR HEALTH WITH THE POWER OF NATURAL INGREDIENTS

- increased urinary excretion
- reducing rheumatoid arthritis and inflammatory pain
- the promotion of a healthy endocrine system
- reducing period pain
- the enhancement of wound healing

**The complex substances in the formula are absorbed much more efficiently than when taken separately. They support our health in many ways because of their synergistic effect. The ingredients in Fulvicherb - Synergy have been selected for their individual properties and also for their synergistic effects - all based on scientific studies. The patented blend of herbal extracts and associated natural substances provides unique support for the healthy functioning of the body. We've created a combination that can provide effective relief from common ailments. Fulvicherb - Synergy is naturally derived and free from artificial additives.**

The active ingredients in Fulvicherb – Synergy support the beneficial gut bacteria and inhibit the growth of harmful gut bacteria. They help to maintain healthy gut flora and prevent bacterial overgrowth syndrome (BOS).

They protect the lining of the stomach and intestines. They help the production of digestive juices, thereby improving digestion and reducing bloating.

They are liver-protective and regenerative. They have a kidney-protective effect.

They help to dilate blood vessels, thereby maintaining optimal blood pressure. They support the proper functioning of the immune system.

### **The herbs module and its effects:**

Camomile flower extract reduces the body's sensitivity to histamine and is an effective remedy for diarrhoea. It has anti-inflammatory properties.

Nettle leaf extract supports circulation and detoxification. Improves kidney and prostate health and women's health. It inhibits the production of inflammatory neurotransmitters such as histamine, serotonin and prostaglandins. Helps stop diarrhoea when it is not caused by a viral or bacterial infection.

Sorrel contains astringents and tannins that treat diarrhoea and intestinal inflammation. These form a film on the surface of the mucous membranes and reduce local irritation. They protect the intestinal lining from harmful bacteria.

Sage has antidiarrhoeal and antibiotic properties and contains astringent substances that reduce inflammation of the mucous membranes.

Traditionally, milk thistle has been used to treat liver diseases, including hepatitis and prostate cancer. Milk thistle has anti-inflammatory and anti-fibrotic properties. Effective in improving liver function.

## SUPPORT YOUR HEALTH WITH THE POWER OF NATURAL INGREDIENTS

It reduces the harmful effects of fungal toxins and xenobiotics. Milk Thistle protects and regenerates the epithelial cells of the liver and kidneys.

Blueberry leaf extract helps to regulate blood circulation and blood pressure. It protects endothelial cells (the cells that make up the inner lining of blood vessels). Supports the proper opening of blood vessels by promoting the production of nitric oxide. Improves blood vessel function in the elderly. Helps the immune system function optimally. Helps fight viruses and bacteria.

Anise supports a healthy heart and healthy blood cell production. Helps control body-weight and reduces inflammation.

Fennel and aniseed increase urine output. Their active ingredients inhibit the growth of harmful bacteria in the urinary tract. They have a mild antispasmodic effect and inhibit the formation of kidney stones. The active ingredients of anise have a similar effect to fennel. They reinforce each other, which is why they are both included in Fulvicherb - Synergy.

Rosehips are a natural source of vitamin C and rutin (vitamin P), a natural immune booster.

### The fulvic acid module:

Fulvic acid is the lowest molecular form of humic acid. It is readily absorbed in the small intestine. Absorption occurs in the form of chelates and complexes. We've used this special property to ensure perfect absorption of the active ingredients in Fulvicherb - Synergy. Because it can form bonds with metals and especially with basic organic molecules, it helps the body to eliminate toxins.

### The fulvic acid-L-arginine module and its effects:

In Fulvicherb - Synergy we use fulvic acid, one of the best complexing agents for the efficient delivery of arginine (complexing agent: the absorption of active ingredients in the body is better when they are bound to other substances than in a stand-alone form). This is called "protected arginine", also known as "fulvic acid-arginine complex". As its absorption does not depend on other factors (membrane transporter proteins, lysine), it is extremely effective.

Fulvic acid-arginine complex is a precursor of nitric oxide. It helps to open blood vessels in the body, thereby improving blood circulation. It is involved in the regulation of blood sugar and insulin, and plays a role in the regulation of breathing. It also improves kidney function. Nitric oxide is an important substance for the functioning of the immune system, especially cellular immunity. It helps in the defence against viruses and bacteria.

### The fulvic acid - electrolyte chelate module:

Fulvicherb - Synergy combines the natural electrolyte with fulvic acid to ensure the most efficient absorption. The added electrolyte is natural, unrefined rock salt from Praid. This is the most natural and effective Ringer's solution. Praid salt has a macro-element composition that is identical to the fluid composition of a healthy body.

**Prebiotic module - pectin and inulin:**

Pectin is an optimal food source for beneficial intestinal flora (lactic acid-producing bacteria, lactobacilli, bifidobacteria, fusobacteria).

Pectin is a beneficial fermentable fibre, a natural detoxifier. It has complexing properties, reduces the osmotic concentration of intestinal contents and helps to prevent osmotic diarrhoea (osmotic diarrhoea: undigested material in the large intestine retains water due to insufficient digestion and absorption, which inhibits water absorption). In the large intestine, it is converted into energy-providing organic acids. It has excellent coating and protective properties. Because it is made up of large molecule

polysaccharides, it can form a gel on the surface of the stomach and mucous membranes. It protects the mucous membranes from the irritating effects of aggressive factors.

Inulin is a large water soluble dietary fibre. The formula used in Fulvicherb - Synergy does not contain the potentially harmful sugars and sugar alcohols found in topinambur syrup.

The greatest benefit of inulin is its probiotic property, which selectively provides nutrients to beneficial gut bacteria (especially lactobacilli, bifidobacteria and acidophilus).

The use of inulin is a useful aid in restoring the gut flora in cases of food allergies.

*The composition of this herbal preparation, the use of fulvic acid as a chelating and complexing agent, the use of a fulvic acid-arginine complex and of special Praid salt-containing ancient sea mud, and the entire manufacturing process, are covered under patent.*
